

Setting up a RETS Password for 3rd Party Products

Some third party products require access to the RETS (Real Estate Transaction Standard) Server in order to auto populate certain data from the MLS to their software. Completing this process requires a one-time setup of a RETS Password. You can accomplish that within flexmls[®] Web by following the simple steps below.

From the Menu Bar select **Preferences -> My Profile**.

On the resulting screen, type in the password you would like, and then re-type it for accuracy verification.

RETS Settings

This screen controls access to 3rd party products (WyldFyre, AgentOffice, etc) that access the MLS data via RETS.
Any changes entered here will only apply to those 3rd party products and not your flexmls web access.

**Change/Set your RETS password
(this is not your flexmls web password)**

RETS Password:

Retype RETS Password:

That's it! Your RETS Password is now ready for use in a compatible 3rd party product.
